

CLASH OF THE CLAWS

RVCE_AI-Commute **AI-Powered Day Logistics Agent for** **Bangalore Professionals**

Chinmayi C Siddapur,
G Tanushri Vaishnavi,
Riya Aggarwal,
Harshini Jayakumar

Problem Statement

- **The Core Issue:** Bangalore professionals lose critical productive hours daily due to avoidable commute disruptions.
- **Target Audience:** Working professionals juggling back-to-back meetings across the city (e.g., Koramangala to Whitefield).
- **The 4 Key Pain Points:**
 - **Calendar Blindness:** Calendars show when a meeting is, but not how long it takes to get there.
 - **No Proactive Warnings:** Users only check traffic after they are already late. No alerts 30 mins before departure.
 - **Mode Confusion:** Struggling to choose between Cab, Metro, or Bus without real-time cost/time data.
 - **Weather Ignorance:** Sudden Bangalore rains disrupt walk/auto routes, causing unexpected delays.
- **The Impact:** Lost productivity, missed meetings, and daily commuter stress.

Current Solution & Gaps

- **The Current Landscape (Siloed Tools):**
 - **Google/Apple Maps:** Great for routing, but passive. They don't read your calendar or alert you proactively.
 - **Uber/Ola:** Good for booking, but isolated. They don't know your next appointment or flag schedule conflicts.
 - **Calendar Apps:** Good for scheduling, but blind to traffic, weather, and travel logistics.
- **The Critical Gap:**
 - **No single tool combines Calendar + Live Traffic + Weather + AI Reasoning.**
 - **No app sends a proactive alert (e.g., via Telegram) saying: "Silk Board is jammed, leave now."**
- **The Opportunity:**
 - **Build a Zero-Cost AI Agent that owns the entire day logistics chain—not just navigation, but decision-making.**

Your Solutions

- **What It Is:** An AI agent that reads your Google Calendar, fetches live TomTom traffic & OpenWeatherMap data, and reasons using Groq Llama 3.3 70B to send proactive alerts.
- **The Core Flow:** Calendar Read → Live Traffic Fetch → Groq AI Reasoning → Telegram Alert → Dynamic Re-routing (Every 10 Mins)
- **Key Features (18 Built & Deployed):**
 - **Morning Briefing:** 5 AM summary of the day's feasibility.
 - **Departure Alerts:** "Leave by 8:30 AM" notifications sent 30 mins prior.
 - **Multi-Modal Comparison:** Instant Cost/Time analysis (Cab vs. Metro vs. Bus).
 - **Cascading Delay Detection:** If Meeting A runs late, Meeting B is automatically adjusted.
 - **Weather-Aware Routing:** Adjusts plans based on rain forecasts.
 - **Two-Way Interaction:** Reply via Telegram to change plans instantly.

Demo / Product Walkthrough

- Scenario: Rohan has 4 meetings across Bangalore.
- 05:00 AM — Morning Briefing:
 - AI Output: "Day Feasibility: 61%. 4 Meetings detected. Weather: Clear."
- 08:30 AM — Departure Alert:
 - AI Output: "Koramangala 9 AM Meeting. Cab (34min/Rs.180) | Bus (35min/Rs.25). Leave by 8:30 AM."
- 09:20 AM — Conflict Alert (The Crisis):
 - AI Output: "Accident on ORR. Travel time now 55 mins, but gap is only 45 mins. Re-routing suggested."
- 09:22 AM — Resolution:
 - User Action: Rohan replies "1" to switch to BMTC 500C alternate route.
 - AI Action: Reschedule message drafted automatically for the next meeting.
- User Experience: Entirely via Telegram. No app install required. Reply 1/2/3 to choose routes.

Tech & Architecture

- **Tech Stack (Rs. 0 Total Cost):**
 - **AI Engine:** Groq API (Llama 3.3 70B) for lightning-fast reasoning.
 - **Data Sources:** Google Calendar API, TomTom Traffic API, OpenWeatherMap API.
 - **Backend:** FastAPI + Python, APScheduler, OpenClaw (Context Aggregator).
 - **Interface:** Telegram Bot API.
 - **Hosting:** Render.com.
- **AI Usage & Logic:**
 - **Groq Llama 3.3 70B:** Powers full-day logistics analysis, route decisions, conflict detection, and the "Day Feasibility Score."
 - **OpenClaw:** Aggregates Calendar + Traffic + Weather context into structured JSON for the AI.
- **System Flow:**
Data Sources → OpenClaw Context Aggregator → Groq Reasoning → FastAPI Backend → APScheduler → Telegram

Two-way alerts

Impact & Use Cases

Use Case Scenarios:

1. Sales Executive

- **Challenge:** 5 client visits across Bangalore
- **Solution:** AI sequences optimal route and alerts if traffic makes any visit infeasible

2. Tech Employee

- **Challenge:** Morning standup in Koramangala, afternoon sprint in Whitefield
- **Solution:** 30-min departure alert with cab vs. metro trade-off analysis

3. Consultant

- **Challenge:** Sudden rain disrupts travel plans
- **Solution:** Rain alert triggers automatic auto→metro switch. No manual replanning needed

4. Freelancer

- **Challenge:** Tight meeting schedules
- **Solution:** AI detects 45min gap but 55min travel time and flags conflict before crisis

Scale Potential:

- **Target Market:** Every professional in Indian metro cities
- **Expansion Ready:** Mumbai, Hyderabad, Chennai, Delhi NCR
- **Broader Reach:** WhatsApp integration possible for mass adoption

Differentiation

Why AI-Commute Stands Out:

Proactive, Not Reactive

- Unlike Google Maps (you ask → it answers), AI-Commute pushes alerts before you think to check
- 30 min before departure, every 10 min if conditions change

Calendar-Aware Intelligence

- No other tool reads your full day schedule and reasons about the entire chain of meetings
- Not just the next one—holistic day planning

Our MOATs (Competitive Defenses):

MOAT 1 — Zero-Cost Infrastructure

- Entire stack runs at Rs. 0/month
- Competitors charging for similar features cannot overcome this cost advantage
- Sustainable pricing leadership

MOAT 2 — Telegram-Native UX

- No app install, zero friction
- Reply 1/2/3 is the entire interface
- Lowest possible adoption barrier in India
- Leverages existing user behavior
